

Individual Reflection 2

Kameron Toews

Throughout Stages 4-6 I have taken a more involved role in contributing to the group. I was assigned to lead stages 4 and 5 and as such I was responsible for contributing the majority of the queries for our group. Additionally, every task in these stages was completed on time and group chemistry and cooperation is higher than ever.

In stage 4 I spent time researching our databases topic so that I could better craft relevant and interesting queries for the next stage. After that I spent time crafting 10 queries for our group, while listening and applying feedback from meetings with my fellow group members. Additionally I used some of my research and background in Basketball to give input on the other 2 queries added by the other group members.

In stage 5 I listened to the feedback from stage 4 and implemented that into the 8 complex queries I made. Additionally during our teams meetings I helped alter some queries made by my teammates to help avoid divide by 0 errors. Additionally I showed them some other functions that could help their queries. However, I needed my teammate to step in to write the division query and they were happy to take it on and crushed it.

Lastly in stage 6 I helped implement a couple queries into our database in a manner that helps avoid unwanted SQL injection.

Throughout all these stages our team has crushed on the communication and cooperation fronts. For the future the only thing that I could think to do is to stay on course and keep delivering consistent quality.
